

Maximize Efficiency and Control with Software Built for Your Business

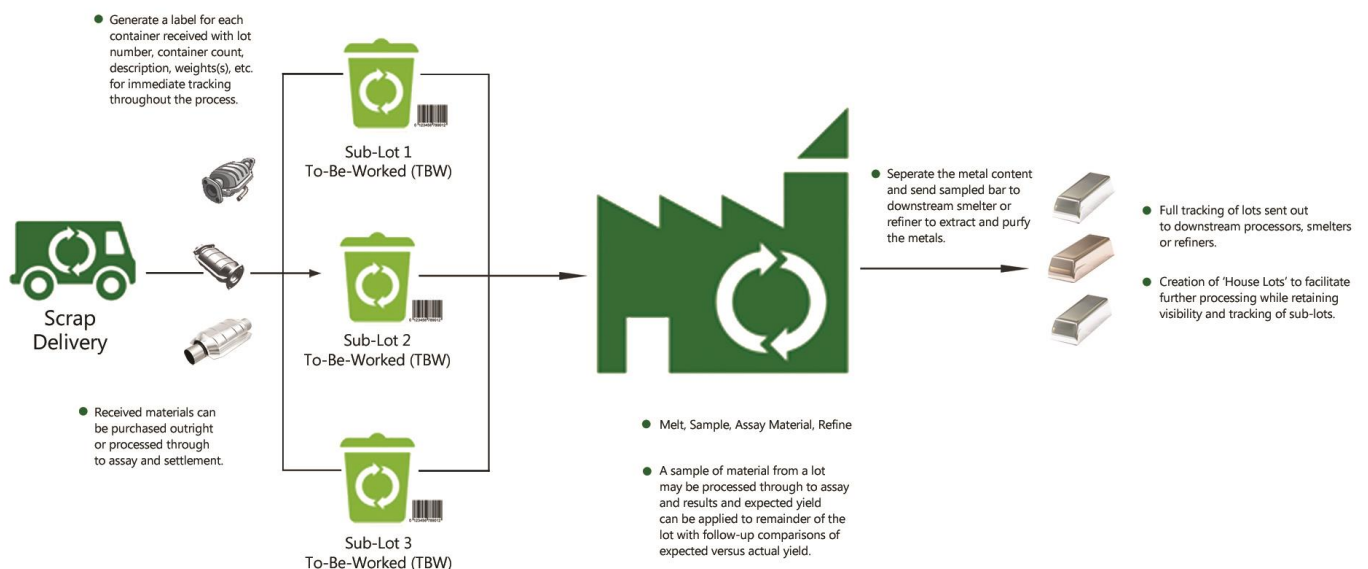

If you purchase scrapped Automobile Catalytic Converters and recover Platinum Group Metals (PGM), specifically Platinum (Pt), Palladium (Pd) and Rhodium (Rh) contained in the catalyst inside the converters and/or you are involved in the smelting or further downstream processing of auto catalysts, Computer Associates (CAI) can help with a range of software and services to the different players in the market.

From the receipt of the spent ceramic and metallic catalytic converters to final financial return, CAI's NAV for Recycling helps our customers improve efficiencies, processing accuracy and the service they provide their customers. With NAV, you'll get superior overall value and the highest yield for your autocatalyst refining lots

Because they play a pivotal role in the automotive industry as well as numerous other industries, the demand for PGMs is huge. More than 98% of new cars sold worldwide each year are now fitted with these devices. Currently, over 50% of PGM sales are for use in catalytic converters. Their value is now on par with, and often exceeds, that of gold.

Because catalytic converters tend to vary widely in terms of their precious metal content, initial measurements must be precise. NAV tracks all sampling and your specific assaying procedures to:

- determine each sub-lot's exact chemical composition;
- obtain an accurate quantities of recoverable platinum, palladium, and rhodium;
- identify if the precious metal is free from cadmium (Cd), mercury (Hg) or other hazardous contaminants materials contained in refining lots.

As lots of raw catalytic converters are received they are separated into individual sub-lots based on the characteristics of the material, converter type and associated precious metals content prior to being processed. Every consigned batch is processed separately to generate an accurate return to the customer.

Built on Solid Microsoft Dynamics NAV ERP Software Platform

Our ERP software for the Precious Metals industry is based on Microsoft Corporation's® industry-leading Dynamics® NAV Software. Microsoft's Dynamics NAV is a fully integrated, multi-language and multi-currency ERP solution designed for small to mid-market and installed at more than 300,000 companies in 42 countries with full multi-lingual and multi-currency support. Dynamics gives businesses complete control over their core business processes, the precision to perfect their supply chain and the insight that their employees need to perform their best.

CAI's software also includes:

| | |
|-------------------------------------|---|
| Lot Control | ■ Create production orders and document the movement of materials throughout the refining process, including receiving, vault, fire assay, wet chemical analysis and other work centers. |
| Settlements / Contracts | ■ Settle your clients' accounts using current market pricing or an agreed-upon fixed price. Factor in gross and refined weight, accountability %, refining charges, assay fees and other charges |
| Advance Payments | ■ Advance your clients and track all advances through to settlement. Maximize customer service! |
| Metal on Account | ■ Monitor and maintain accurate and up-to-the-minute information on each customer's precious metal balances held in pool accounts and metals you may have on account with other vendors. |
| Accountability | ■ Quickly determine how much product is being returned to each customer based on material type. |
| Manufacturing | ■ Produce the right precious metal alloy products, in the right quantities, at the right time and at maximum profit. |
| Refining & Finished Goods Inventory | ■ Store and manage house lots that have been refined to saleable finished goods, i.e. grain, flat stock, wire, etc. |
| Business Intelligence | ■ View your Key Performance Indicators (KPIs) in a flexible and completely customizable management 'dashboard'. |
| Hedging Function | ■ Hedge at the customer or specific lot level to protect yourself and your customers from market price fluctuations. Establish metal quantity and price for each vendor or associate a precious metal quantity and price with a specific lot. |
| Accounting & Financials | ■ Automate and enhance your back-office operations. CAI's refining module is tightly integrated with Microsoft's Dynamics NAV GL, AP, AR and other financial and accounting applications. |
| Multi-Lingual, Multi-Currency | ■ Maximize your deployment of this industry-specific ERP solution. |

Why Computer Associates?

Computer Associates (CAI) has been providing software solutions to the precious metals industry for more than 35 years. Today our ERP solutions are used by some of the biggest names in the industry to maximize efficiency and control. Our clients, located in the U.S., Europe and the Middle East, have given us an in-depth understanding of industry-best practices, and have allowed us to provide business-specific software tools that drive profitability.
