

PM Recycling

Integrated Enterprise Resource Planning (ERP) Software for Precious Metal Recovery

Maximize Productivity and Profitability with Software Built for Your Business

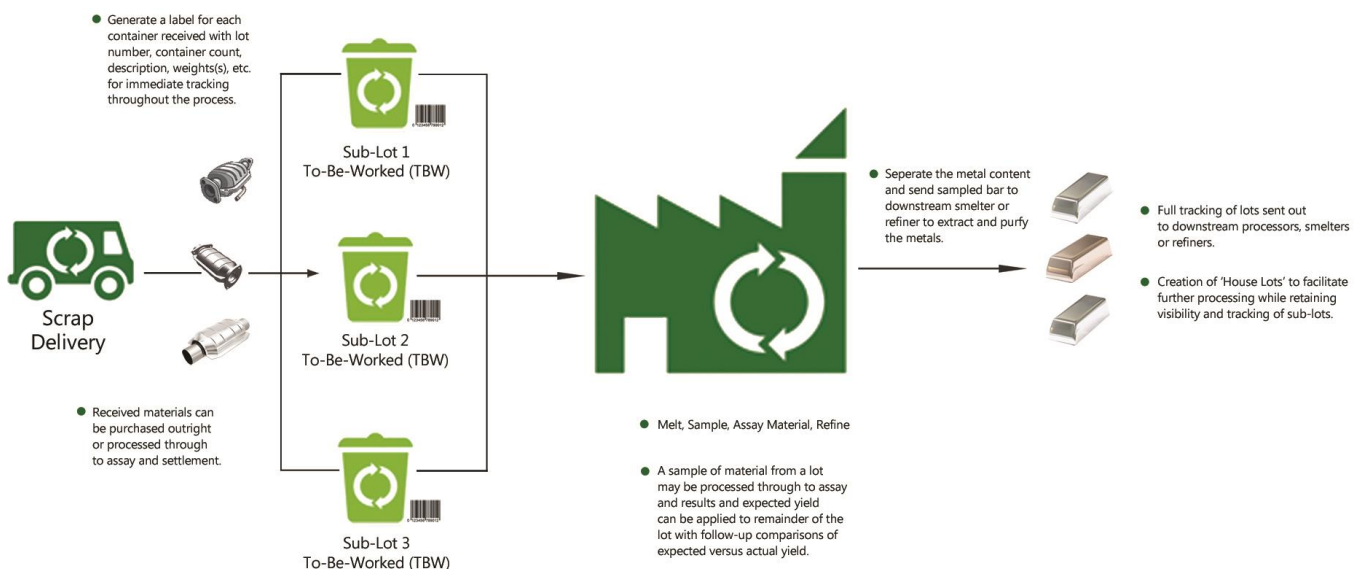

If you purchase scrapped Automobile Catalytic Converters and recover Platinum Group Metals (PGM), specifically Platinum (Pt), Palladium (Pd) and Rhodium (Rh) and/or you are involved in the smelting or further downstream processing of auto catalysts, CAI Software can help with a range of software and services to the different players in the market.

From the receipt of the spent ceramic and metallic catalytic converters to final financial return, CAI's PM Recycling software helps our customers improve efficiencies, processing accuracy and the service they provide their customers. You get superior overall value and the highest yield for your autocatalyst refining lots.

Because catalytic converters tend to vary widely in terms of their precious metal content, initial measurements must be precise. PM Recycling tracks all sampling and your specific assaying procedures to:

- determine each sub-lot's exact chemical composition;
- obtain an accurate quantities of recoverable platinum, palladium, and rhodium;
- identify if the precious metal is free from cadmium (Cd), mercury (Hg) or other hazardous contaminants materials contained in refining lots.

Because they play a pivotal role in the automotive industry as well as numerous other industries, the demand for PGMs is huge. More than 98% of new cars sold worldwide each year are now fitted with these devices. Currently, over 50% of PGM sales are for use in catalytic converters. Their value is now on par with, and often exceeds, that of gold.

As lots of raw catalytic converters are received they are separated into individual sub-lots based on the characteristics of the material, converter type and associated precious metals content prior to being processed. Every consigned batch is processed separately to generate an accurate return to the customer.

Built on Solid Microsoft Dynamics ERP Software Platform

PM Recycling is based on Microsoft Corporation's® industry-leading Dynamics® Software. Microsoft's Dynamics is a fully integrated, multi-language and multi-currency ERP solution designed for small to mid-market and is installed at more than 300,000 companies in 42 countries. Dynamics gives businesses complete control over their core business processes, the precision to perfect their supply chain and the insight that their employees need to perform their best.

CAI's software also includes:

Lot Processing and Control	<ul style="list-style-type: none"> PM Recycling lets you create production orders and document the movement of materials throughout the recycling process. You can easily tag and track processed and unprocessed material throughout your facility and at third-party refiners so you always know the exact volume, location and value of your inventory.
Advance Payments	<ul style="list-style-type: none"> Maximize customer service by advance your clients the expected lot value while recording the advance against the specific lot so as to eliminate errors.
Material Sampling	<ul style="list-style-type: none"> Sample material from each lot can be assayed to establish expected precious metal content and value for the entire lot. Perform follow-up comparisons of expected versus actual yields.
Settlement	<ul style="list-style-type: none"> Settle your client's accounts using current metals pricing or an agreed-upon fixed price. Utilize the results of sample assay analysis and attribute the findings to entire lot.
Hedging Function	<ul style="list-style-type: none"> Hedge with both suppliers and downstream refiners. Protect yourself and your customers from market price fluctuations. Establish metal quantity and price either at the vendor or lot level.
Inventory Control	<ul style="list-style-type: none"> Tighten inventory management to help increase operational efficiency across your business, improve customer service, and reduce inventory and distribution costs. With PM Recycling, you can connect inventory control, purchasing, and sales order processing with demand planning to reduce costs, improve cash flow, and help ensure that you have the right stock available when you need it.
Financial Management	<ul style="list-style-type: none"> As the backbone of your business management solution PM Recycling's accounting and finance solutions help you track and analyze your business information. With end-to-end integration, you can efficiently manage your general ledger, payables, receivables, inventory, analytical accounting, fixed assets, and cash flow as well as perform bank reconciliations and collections. You can also manage your financial processes across multiple currencies, locations, or companies.
Customer Portal	<ul style="list-style-type: none"> Offer customers secure, 24/7 access to your business and enable a complete, closed loop process. Automatically connect clients with their account manager(s) upon login to the portal to create a stronger bond between client and company. Enable your clients to request on-demand reports, such as Lot Reports, Settlement Reports, Transaction Logs and much more.
Business Intelligence and Reporting	<ul style="list-style-type: none"> Bring strategic insight into your business processes with sophisticated reporting, analysis, and budgeting solutions that help you improve and propel critical decision-making throughout the organization. Direct access to real-time, business-critical information and a wide range of analytical and reporting tools can help you manage budgets, create and consolidate reports, and look for trends and relationships.
